Instruction video on YouTube was as easy as your doing yourself. Fits like a glove. I bought three other items from a1auto, this company hasn't failed me yet. Trailer Hitch Plug Receptacle. Was a exact match to bad plug in on truck. Was a good fit and works great. Great item! Easy to replace after watching 1A Auto's video. Easy to order just a few days to get to my house and easy to put on great products thanks guys. Was very pleased with this product. I like the video that is included on the website on how to install. It was very easy to install and everything worked. I would recommend this product to anyone. Electric conector. Fast shipping worked as advertised would highly recommend 1aauto. Very easy. Thought my 20 year old plug was my problem. Turns out it was a fuse. No harm in a new plug. Easy to install just a flat head screwdriver and everything went in easy and fit right. Fit my Suburban perfectly. Exact replacement from original. It does not have the GM logo on it like the original, but it is made by the same company as original. I have the factory tow package on my truck what I'm looking for is the plug connector that plugs into this receptacle do you all sell that? Wesley M. Top positive review. Reviewed in the United States on May 29, I bought it new , miles ago. It is 17 years old and the plastic trailer plug had been used many-many times. The flap door had come off and that actually holds the trailer plug in.. So I was going to buy a auto store generic and cut wires and install. But checked here to see if the connector was cheaper, As I hate auto stores.. They will not take care of you because they answer the phone all the time. Like that guy on the phone can give them money faster than the guy in front of them?? So click click I ordered online.. It came it had directions. It was 5 minutes labor., One person found this helpful. Top critical review. Reviewed in the United States on August 4, Agree pollock plugin substituted for dorman. Does not fit my Sierra hd denali. This is a Pollak unit in a Dorman Box. Says Pollak right on the front of it. Install is easy. Mine has 10 years of Ohio corrosion on it. Push in the tab and the wiring harness pops right off will rain some debris down in the process. To pull the old unit, push in the locking tab with a flat head screwdriver it will probably break, no biggie. If looking at the back of it where the factory harness plugs in, rotate counter-clockwise. You will need wide, adjust pliers to grip and turn it as it won't budge by hand. Install is reverse of removal. Perfect fit and restored lost function. The lid cracked on my OEM trailer plug and wouldn't stay on the pivot pin any longer. I ran it for a while without the cover but water got in and reeked havoc on the wiring causing corrosion around the pins. I could keep the exterior surfaces clean and that worked for a while but eventually I started having problems in the wiring connector. Symptoms included not constantly getting a backup light signal which kept the disk brake lockout from working which kept the trailer from backing consistently to having the cruise control shut off when you used the turn signal to cruise control not working when you had the headlights on. I only traced it to this connector because of the backup light problems and the fact that they all got better if the connector was wet. This was hard to track down and I thought I was going to have to replace the whole thing but this was easy to install once I managed to get the crusty connector off the back of the OEM one and get it cleaned with just depressing a tab and turning. Installation is just as easy, I cleaned the contacts very well with contact cleaner and put some dielectric grease on before plugging in the connector. Now all function is restored and the seals work great to keep the water out and the trailer connectors fit much better. Wish I would have just replaced it sooner, for the price I have no complaints. My OEM plug on my '03 Silverado did the classic UV rot and was falling to pieces, and the cover was long gone causing water to ingress. For very little cost this make the plug like new and should last as long if not longer than the OEM one. It is shocking what the dealership wants for a similar part! This plugged right in to the OE spot for a Silverado The cap has strong spring retention holding the cover closed firmly when not in use. This does not feel cheep nor does it seem like its going to break. All you have to do to get this swapped out is look at your plug face on the truck and find the 2 detentes plastic retainers that should be visible from the bumper and twist the outlet from the back and the plug should come right out. Remove the plug from the back swap out the plug and reverse the operation. Done and done. No need for any re wiring or messing around with wiring a different style plug into the truck. I would defiantly recommend this if you need to replace the outlet. Right price and a perfect replacement for my GMC Classic. Remove the wire - Unplug the old one twist , remove it,add a little di-electric grease , plug the new one into the factory bracket give it a twist and plug the wire harness back in. I watched a You Tube video which was perfect and even the same brand item and it is a simple fix. You can do this! Very easy to install, simply remove the original factory wiring harness by pressing the lock tab in, and twisting. Remove the wiring harness, and install the new one by reversing the process. Cover is spring loaded which not only ensures that it stays free of dirt and rust, but also helps hold the trailer wiring harness firmly in place so it doesn't back-out. After you kind of figure out how to get the old one off it is a 1 minute swap. Replacing mine due to the door breaking off. Manufacturing is Just off a tad bit from oem causing an extremely tight fit. It caused one of the locking tabs to break. The other holds the plug just fine. Images in this review. This looked just like the original one but the groove it slides in was too tight. Tried bending the flange on the truck slightly to accommodate it starting to no avail. I put silicone spray on it to no avail then grease. Then one of the retainers that would normally hold it secure broke off. Should have went to the dealer. Save your money, this is poor quality. It was exactly as specified, fits my GMC perfectly and works great. The price was the icing on the cake. Same fit as OEM. I recommend di-electric grease on the back of the plug to ensure a water tight seal. Perfect replacement GMC Sierra One person found this helpful. Slightly different shape than OEM however fits factory slot and plug perfectly. Took all of 2 minutes to swap over. Seems to have resolved my connection problems I had with the factory plug. Fits right in place of the original without issue. Return due to wrong part ordered on my part. Fit and function superb! Plugged right into the existing harness on the sierra hd and locked into the stock holder on the bumper. See all reviews. Top reviews from other countries. I bought it new , miles ago.
