Fuse r6

Growing up in a military family in Samarkand, Uzbekistan, Shuhrat Kessikbayev immigrated to Russia shortly before the fall of the Soviet Union. His parents encourage him and his brother to embrace all that was Russian, so it wasn't until his teens when he learned to embrace his Uzbek heritage. Kessikbayev and his brother followed in their father's footsteps and enrolled in the military. Showing an aptitude for science at an early age, the military honed Kessikbayev's interest in mechanical engineering and trained him to be a mechanist. Kessikbayev applied these skills in numerous engineering projects which landed him a spot in the coveted weapon testing brigade at Alabino firing range near Moscow. During his time in the 27th Motor Rifle Brigade he excelled as a sharpshooter and has extensive weapon knowledge. Kessikbayev was also known to be a member of the Spetsnaz , however, all operation details have remained classified. Kessikbayev's brother also went missing at an unknown point though the details of his disappearance also remain classified. Developing his own weapon and his ability to improvise in the field with scrap materials and minimal tools made Kessikbayev a legend among his fellow recruits. Despite this, Kessikbayev's methods of breaking down enemy defenses has been seen as reckless by others. In , Kessikbayev had an altercation with SDU Operator Siu "Ying" Mei Lin , who considered him to be a "questionable asset" due to believing that he had a disregard for civilian lives. Over the next five years, Kessikbayev readily made himself available in team planning and execution of numerous operations against the White Masks. At one point, Kessikbayev was engaged for two years but later called the wedding off due to wanting to take a different path in life. At the end of the session, Kali asked Kessikbayev why he hesitated in firing. Kessikbayev explained that Apha "Aruni" Tawanroong was in his line of fire. Kessikbayev requested to tag along with them to see the equipment which Kali agreed to. Kali explained that it was rated to absorb or deflect most conventional high-caliber rounds. She also stated that it was light weight, increased reaction time, reduced muscle strain, and was sealed against the majority of biological and chemical weapons. Kessikbayev asked Kali if the equipment was Rainbow compliant and was told it was "more or less". Kessikbayev reminded Kali that she was supposed to wear her uniform for the Six Invitational. Kali dismissed Kessikbayev's comment, saying that the Masterframe would be her uniform and that it was only the beginning. Kessikbayev is an expert tinkerer and a master craftsman, more at ease with the workings of machines than those of people. His gruff demeanor and curt speech should not be mistaken for misanthropy. He possesses a strong moral conviction. To say that Specialist Shuhrat "Fuze" Kessikbayev is restrained does not give the full picture. I was reminded of my grandmother's phrase: "talking to him was like pulling teeth. I wouldn't say that he's difficult. He's quite pleasant and hospitable. But he is It took some work but we finally managed to have a revealing conversation. Kessikbayev is quiet except with Specialist Timur "Glaz" Glazkov. When he does speak, people tend to hang off his every word. Field reports mention that Kessikbayev readily makes himself available in team planning but often falls into a cone of silence during operations. It's critical that he maintains communications with his team, otherwise there may be further altercations such as the one with Specialist Siu Mei "Ying" Lin regarding civilian casualties. This is doubly critical given some of our operators come from units with "zero casualty" rules. It was necessary to address past reports about Kessikbayev's recklessness, so I asked him to describe an operation from his point of view. His objective, he explained, is to break down the defense as efficiently as possible, but insists he isn't careless. It's clear that his creative engineering skills are a critical asset. He's highly intelligent and calculating. While hard-hitting, Kessikbayev does possess good situational awareness. I suggested that he concentrate on improving this during future ops. I was unable to ascertain any details about his brother who is allegedly MIA. That file remains classified. However, I did manage to get Kessikbayev to open up a bit about his personal life. He was engaged for two years but the wedding was called off after he decided it was "not the road to take. I asked him to elaborate on the experiences, but in his typical understated way he simply replied, "It was interesting. It proved to be an effective means of clearing a room, dealing the most damage to hostiles while keeping the Operator relatively safe. The "Matryoshka" can be anchored either vertically or horizontally. Once deployed, the piston burrows through walls or floors, dispersing live cluster grenades while spinning to deal the most damage from any directions. The "Matryoshka" is most useful in conditions where collateral damage is not a concern. Not recommended for hostage extractions, or in areas where there is a high risk of friendly fire. I'll admit I'd already jumped on the device evaluations even before I received the official request. No surprise there, right? I was already familiar with the Matryoshka, having studied its trigger mechanism in relation to my Brimstone Charge. The mechanical assembly is modeled after aerial bomb fuzes when detonation is tied to a fuze with an integrated firing pin. It's less sophisticated than my Brimstone, but it doesn't need that to be effective. Clearing rooms and flushing out defenders is its primary function and I'd say it operates as designed. It actually has a benefit in that some

targets are terrified of the boom. Shuhrat obviously understands the importance of classical conditioning. I just wish it only affected the people he's going up against, but that's the problem, with high explosives - they don't discriminate. This wiki. This wiki All wikis. Sign In Don't have an account? Fuze is best played as an aggressive flanker and area denial Operator. His strengths allow him to dispatch defensive capabilities and harass enemies anchored in defensive positions. Fuze's APM-6 cluster charge propels a group of explosive cluster grenades through any soft breach surface. Growing up in a military family in Samarkand, Uzbekistan, Shuhrat Kessikbayev immigrated to Russia shortly before the fall of the Soviet Union. From an early age Kessikbayev displayed an aptitude for science. His interest in mechanical engineering was honed in the military where he also trained as a machinist. Kessikbayev has applied these skills in numerous engineering projects, including his own weapon, and his ability to improvise in the field with scrap materials and minimal tools has made him a legend among his fellow recruits. This is one of the key reasons he is an asset to Rainbow Operations. During his time in the 27th Motor Rifle Brigade he excelled as a sharpshooter and has extensive weapon knowledge. Deployment within the Spetsnaz is confirmed, however, all operation details remain classified. Kessikbayev is fluent in Uzbek, Russian, Ukrainian, and English. But he isâ€¦ contained. It took some work but we finally managed to have a revealing conversation. When he does speak, people tend to hang off his every word. Field reports mention that Kessikbayev readily makes himself available in team planning but often falls into a cone of silence during operations. It was necessary to address past reports about Kessikbayev's recklessness, so I asked him to describe an operation from his point of view. While hard-hitting, Kessikbayev does possess good situational awareness. I suggested that he concentrate on improving this during future ops. I was unable to ascertain any details about his brother who is allegedly MIA. That file remains classified. However, I did manage to get Kessikbayev to open up a bit about his personal life. Fuze is good for more than just killing defenders. His cluster charge can destroy all gadgets placed in a defensive stronghold. If you can get above a hallway or room full of barbed wire, traps or defenders, your cluster charge will shoot small charges that will guarantee an easier entry later in the round.

 Defenders have a few seconds to get away or take cover from the damage of the APM-6 cluster charge. They will often take the shortest route. Be ready with a line of sight and pick them off one by one as they run to safety - strong to counter anchor players in predictable spots. The cluster charge might seem chaotic, but it's more predictable than you think - it will always disperse in a fan like pattern, starting from left to right. How you place it in will greatly impact the spread and area covered by the Cluster - experiment with this and learn to cover as much ground as possible.
